GO ECO STOVE RANGE

Introducing the

GO ECO STOVE RANGE

Entry level Ecodesign Ready and clearSkies certified stoves for the home, with the ultimate in warmth, character and ambience – Go Eco stoves really hit the mark.

The Go Eco range from Charlton & Jenrick are highly developed technical stoves that share much of their DNA with more expensive Fireline stable mates. The Go Eco range keeps all of the efficiency and ease of use with a simpler approach to design to offer an extremely cost effective EcoDesign 2022 ready stove. Those concerned with both the environment and economical pricing need look no further!

clearSkies is the new independent emissions and energy performance certification scheme for stoves and provides an easily recognised and independent verification of appliance performance, helping you make an informed purchase decision. All Go Eco stoves achieve the highest possible Level 5 clearSkies mark meaning that they exceed Ecodesign 2022 emissions and efficiency rules by approximately 30% or more. See <https://www.clearskiesmark.org/> for more details.

- SIA Ecodesign Ready 2022 certified – ultra clean burning and low emissions
- Full multifuel capability as standard
- 80% plus efficiency
